

Detect the distance between the physical user location and the address validated during onboarding or other KYC/AML workflows

Detect rooted, emulated, and jailbroken devices during onboarding or other KYC/AML workflows

Develop profiles of trusted locations for your customers'

Leverage biometrics step-up to validate the end user on the other side of your lottery or gaming app

Create a managed device biometrics profile for your customer based on how they hold their device, how hard they typically tap their screen, and how they swipe in your app

Eliminate the potential for a customer to alter ID documents with different photos

Compare and provide a matching score from the photo provided on the ID document to a selfie captured by the customer

Ensure that the customer is physically present

Provide you with deduplication alerts

**To authenticate the person is who they say they are, iGaming and lotto organizations need to adopt an identity verification that can seamlessly perform the above solutions.**

The logo for IDVerifact, featuring the letters 'ID' in a white box with a checkmark, followed by the word 'Verifact' in a white, italicized sans-serif font.
